README – Basic Conditional Formatting

Project Overview

This Excel project uses Conditional Formatting to automatically highlight the top and bottom sales and profit values. The goal is to improve report readability and make important values easier to identify.

Objectives

- Apply Excel Conditional Formatting rules instead of manually coloring cells.
- Highlight the top 3 and bottom 3 values in Sales and Profit.
- Create a simple rules list documenting the formatting applied.

Tools Used

Microsoft Excel

Dataset

Sample retail sales data with Product, Region, Units Sold, Sales, and Profit columns.

Steps Completed

- Entered the retail sales dataset into Excel.
- Applied green fill to the top 3 values and light red fill to the bottom 3 values.
- Applied the rules to both Sales and Profit columns.
- Added a rules list and saved the workbook.

Expected Outcome

The highest and lowest values stand out automatically. If a number changes, Excel updates the formatting according to the rules.

Suggested Excel File Name

Basic_Conditional_Formatting.xlsx
